

CLAIMS

1. A composition for oral cavity comprising:
(A) a calcium ion-supplying compound which supplies calcium ions at 100 to 16000 ppm;
(B) a monofluorophosphate ion-supplying compound which supplies monofluorophosphate ions at 250 to 25000 ppm; and
(C) one or more acids selected from the group consisting of lactic acid, malic acid, and tartaric acid, wherein the composition has a pH of from 4 to 6.2.
2. The composition for oral cavity according to claim 1, wherein the composition comprises the acid component (C) as an acid and a salt of the acid.
3. The composition for oral cavity according to claim 1 or 2, further comprising a sugar alcohol.
4. A process of stabilizing a composition for oral cavity comprising (A) a calcium ion-supplying compound which supplies calcium ions at 100 to 16000 ppm and (B) a monofluorophosphate ion-supplying compound which supplies monofluorophosphate ions at 250 to 25000 ppm, characterized in that the process comprises adding (C) one or more acids selected from the group consisting of lactic acid, malic acid, and tartaric acid to the composition to adjust the pH to from 4 to 6.2.
